

Valley View Fire Shed

This fire shed consists of mature and young live oak, coyote brush, poison oak, non-native pine and annual grasses.

Treatments in this unit will include mastication, hand labor to cut vegetation in areas where mastication machines cannot reach and to fell non-native pine and thin small diameter oak trees. Larger diameter trees will be chipped with a track chipper and broadcast to suppress weed growth.

Where possible a “**dozer line**” of bare mineral soil will be constructed to aid in the use of prescribed fire for maintenance. In steeper, less accessible areas, the “dozer line” may be constructed by hand.

Cost Estimate of Initial Treatment: \$83,000.00

Estimated Cost of Maintenance One Year After Initial Treatment: \$17,000.00

Dozer Line
